Abstract

Do countries that improve their protection of intellectual property rights gain access to new product varieties from technologically advanced countries? We build the first comprehensive matched firm level data set on exports and patents using confidential microdata from the US Census to address this question. Across several different estimation approaches we find evidence that these protections affect where US firms export.

JEL Classification: F13, F14, M21, O31, O3.

Key Words: trade, innovation, intellectual property rights, patents.
