Jung Hee Ha

Hanyang University, Seoul, Korea

Highlights

- 112 art therapy students and 91 counseling psychology students in Korea participated in a survey
- professional identity is interrelated with career commitment and subjective well-being
- career commitment and subjective well-being were significant predictors of professional identity
- moderate to high levels of professional identity and career commitment in both art therapy and counseling psychology students

Abstract

This article explores the professional identity, career commitment, and subjective well-being of art therapy students compared with those of counseling psychology students. The participants were 112 art therapy graduate students and 91 counseling psychology graduate students, all of whom had completed the My Vocational Situation (MVS), Career Commitment Measurement (CCM), and Concise Measure of Subjective Well-Being (COMOSWB) measures. Data were analyzed using descriptive statistics, correlation analysis, regression analysis, *t*-tests, and χ^2 -tests. The results of this study are as follows: First, correlation analysis results showed that professional identity is interrelated with career commitment and subjective well-being. Second, the results of regression analysis indicated that career commitment and
