## Highlights

- Prenatal cocaine exposure (PCE) alters responses to environmental stress.
- PCE may increase sensitivity to childhood maltreatment (CM).
- PCE was associated with poorer coping strategies only among adolescents with CM.
- Greater external assets were related to more effective stress responses.

## Abstract

**Background:** Prenatal cocaine exposure (PCE) may alter responses to stress. Children with PCE tend to grow up in suboptimal caregiving environments, conducive to child maltreatment (CM). Guided by the diathesis-stress model, the present study examined differences in self-reported
