Highlights

- Addiction had health, social and spiritual consequences.
- Participants described loss of employment, crime and social isolation.
- The power of addictive substances overpowered religious practice.
- The biopsychosocial-spiritual addiction model fitted well in the Islamic context.

Abstract

Background: There is a dearth of research in the published literature on substance use and addiction in the Middle East and Islamic countries. This study was the first to explore whether the biopsychosocial-spiritual model of addiction was relevant to an addicted treatment population in Jordan, an Islamic country. **Methods:** A qualitative study design
