ANTHROPOMORPHISM IN THE SEARCH FOR EXTRA-TERRESTRIAL INTELLIGENCE
THE LIMITS OF COGNITION?

Dr. Ulrike M. Bohlmann¹
Moritz J.F. Bürger²

Abstract/ Introduction

The question “Are we alone?” lingers in the human mind since ancient times. Early human civilisations populated the heavens above with a multitude of Gods endowed with some all too human characteristics – from their outer appearance to their innermost motivations. En passant they created thereby their own cultural founding myths on which they built their understanding of the world and its phenomena and deduced as well rules for the functioning of their own society. Advancing technology has enabled us to conduct this human quest for knowledge with more scientific means: optical and radio-wavelengths are being monitored for messages by an extra-terrestrial intelligence and active messaging attempts have also been undertaken. Scenarios have been developed for a possible detection of extra-terrestrial intelligence and post-detection guidelines and protocols have been elaborated. The human responses to the whole array of questions concerning the potential existence, discovery of and communication/interaction with an extra-terrestrial intelligence share as one clear thread a profound anthropomorphism, which ascribes classical human behavioural patterns also to an extra-terrestrial intelligence in much the same way as our ancestors attributed comparable conducts to mythological figures. This paper aims at pinpointing this thread in a number of classical reactions to basic questions related to the search for extra-terrestrial intelligence. Many of these reactions are based on human motives such as curiosity and fear, rationalised by experience and historical analogy and modelled in the Science Fiction Culture by literature and movies. Scrutinising the classical hypothetical explanations of the Fermi paradox under the angle of a potentially undue anthropomorphism, this paper intends to assist in understanding our human epistemological limitations in the search for extra-terrestrial intelligence. This attempt is structured into a series of questions: I. Can we be alone? II. Who are we looking for? III. Or what are we looking for? IV. Where is everybody? V. What if we make contact and VI. So, what now?

¹ Dr. jur. University of Cologne, Institute of Air and Space Law; Administrator, European Space Agency, Paris; Member International Academy of Astronautics, Member International Institute of Space Law; Member of the European Centre for Space Law; Member Commission Spatiale de la Société Française de Droit Aérien et Spatial. The author’s interest in this reflection was sparked by the visit to the exhibition “Persona – Étrangement humain” at the Paris Musée du Quai Branly – Jacques Chirac, in 2016. The author is deeply grateful to her friends, in particular Prof. Dr. Larry Martinez, who were available to openly discuss, brainstorm and contribute to this reflection.
