Abstract

This paper studies the real exchange rate response to a government-spending shock in a two-country model with productive government purchases and non-Ricardian households. In this economy, the real exchange rate depreciates following an increase in domestic public spending, consistently with most empirical evidence. Importantly, and consistently with empirical evidence, the depreciation occurs both on impact and in the transition. The transmission mechanism works through an increase in domestic private-sector productivity, spurred by government purchases, which reduces real marginal costs at home allowing for accommodating monetary policy response.

JEL classification: E52, E62, F41, F42.

Keywords: Exchange Rate, Fiscal Shocks, Endogenous Monetary and Fiscal Policy.

*We thank Hamid Beladi (editor) and an anonymous referee for the useful comments on the earlier draft. We also wish to thank seminar participants at “Sapienza” University, “LUISS” University, “Utrecht School of Economics”, and participants at the 22nd International Conference on Money, Banking and Finance (LUISS, Rome), the 55th Annual SIE Conference (Trento), the 11th Dynare Conference (National Bank of Belgium, Brussels), the 28th SIEP Conference (Lecce) and the 15th INFINITI Conference on International Finance (Valencia). We acknowledge financial support from the Italian Ministry of University and Research (PRIN 2011 “Asymmetric information, adjustment costs and efficiency: microeconomic foundations and macroeconomic implications”). Usual disclaimers apply.
