A B S T R A C T

The Portuguese National Network for Long-term Integrated Care (Rede Nacional de Cuidados Continuados, RNCCI) was created in 2006 as a partnership between the Ministry of Health and the Ministry of Labour and Social Solidarity. The formal provision of care within the RNCCI is made up of non-profit and non-public institutions called Private Institutions of Social Solidarity, public institutions belonging to the National Health Service and for-profit-institutions. These institutions are organized by type of care in two main settings: (i) Home and Community-Based Services and (ii) four types of Nursing Homes to account for different care needs. This is the first study that assess the RNCCI reform in Portugal since 2006 and takes into account several core dimensions: coordination, ownership, organizational structure, financing system and main features, as well as the challenges ahead. Evidence suggests that despite providing universal access, Portuguese policy-makers face the following challenges: multiple sources of financing, the existence of several care settings and the sustained increase of admissions at the RNCCI, the dominance of institutionalization, the existence of waiting lists, regional asymmetries, the absence of a financing model based on dependence levels, or the difficulty to use the instrument of needs assessment for international comparison.

1. Policy background

The current demographic and epidemiological transition is posing more challenges in developed countries, namely due to the increasing percentage of elderly and changes in patients’ morbidity (e.g. increase of chronic diseases with longer treatment times) [1]. With a rapidly ageing population, Portugal is not an exception. This situation has worsened due to the effects of the economic crisis, which resulted in the emigration of fertile and active citizens [2].

Conscious that the adoption of new policies to (re)configure the health and social care is essential to face these new challenges, several historical milestones and partnerships between the Ministry of Health (MoH) and the Ministry of Labour and Social Solidarity (MLSS) culminated in the formal creation of the current National Network for Long-term Integrated Care (Rede Nacional de Cuidados Continuados Integrados, RNCCI).

Based on already existing institutions, the RNCCI has, as its backbone, the non-profit and non-public institutions known as Private Institutions of Social Solidarity (Instituições Particulares de Solidariedade Social, IPSS) [3], with the Misericórdias (religious non-profit-making institutions with a charitable background) being the main providers [4,5]. Based on the work developed with the IPSS, and in line with the redefinition of long-term care (LTC) services in many European countries due to the increasing number of dependents (Table 1) [6–9], the RNCCI was launched in 2006 [10]. Since then, besides the IPSS and public institutions, a growing number of for-profit-institutions with protocols with the MoH have emerged to provide LTC.

This is the first time that information about the RNCCI has been collated and made available to an international audience, as well as analysed to provide a thorough assessment of its achievement while providing some guidance to policy-makers on potential improvements and future challenges.

2. Main features of the Portuguese LTC system

The RNCCI embraces all forms of continuous, rehabilitation, palliative and nursing care for people with mental and physical lim-
