This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new empirical model is proposed that allows for the investigation of how international return spillovers vary with different levels of trading volume.
- Price changes driven by liquidity-based and information-based trades can both transmit across borders.
- Our findings show interesting geographical patterns in the returns transmission mechanism, which are not evident in the previous literature, i.e., trades originating in Asian markets tend to be more information-based, those originating in American markets tend to be liquidity based, and those originating in Europe are a mixture.
