This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- there are two agents who trade stocks of two different types
- no unique demand/supply exist, trade happens even at disequilibrium
- there are infinite number of fixed points, dynamics is path dependent
- an orbit ends up at either a fixed point or at a no-trade point
- no-trade points demonstrate periodic or chaotic price dynamics
