ABSTRACT**Ethnopharmacological relevance**

the herbal medicinal products (HMP) market is expanding in the world, an expansion that has not occurred in Brazil when considering the number of licensed products. Despite being a megadiverse country, the number of HMP licensed in Brazil is small, and the number of HMP obtained from native species is even smaller. A new legislation for herbal products licensing, which divides the products into two categories, Herbal Medicine (HM) and Traditional Herbal Product (THP) was launched in Brazil focusing on traditional use, as well as a law regulating the use of biodiversity and traditional knowledge.

Aim of the study

to evaluate the situation of HMP licensed in Brazil and to make a comparison with the data obtained in 2008 and 2011, discussing the evolution of the licensed products and the possible impacts of the new legislation.

Materials and methods

a survey was carried out in the Brazilian Health Regulatory Agency (Anvisa) database to verify the HMP licensed in Brazil in September 2016. The data obtained were compared with two surveys previously published.

¹ Me, Ana Cecília Bezerra Carvalho, declare that the study was performed according to the international, national and institutional rules considering animal experiments, clinical studies and biodiversity rights. The study details the herbal medicines licensed in Brazil, the Brazilian market of herbal medicines and how the new Brazilian legislation based on traditional knowledge is intended to increase the Brazilian market for herbal medicines.
