Role of the funding source

Funding was provided by Julius Clinical Ltd. No individuals besides the authors were involved in the study design; in the collection, analysis and interpretation of data; in the writing of the report; or in the decision to submit the article for publication.

Conflicts of Interest

None

Trial information

The methodology proposed in this paper is illustrated using data from the Second European Stroke Prevention Study (ESPS2). ESPS2 was initiated in 1988 and supported by a grant from Boehringer Ingelheim.

Acknowledgments

The authors thank Boehringer Ingelheim for the provision of the data, NA Hilkens for useful discussion, and M Hugenholtz and P Nowak for their assistance in generating pilot data.

Abstract

Objective: Central monitoring of multi-center clinical trials becomes an ever more feasible quality assurance tool, in particular for the detection of data fabrication. More widespread application, across both industry-sponsored as well as academic clinical trials, requires central monitoring methodologies that are both effective and relatively simple in implementation.
