This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Jobs have arbitrary sizes, and machines have non-identical capacities.
- Any job cannot be assigned to machines whose capacities are less than its size.
- Initiate the study of unequal release times and a fixed number of capacities.
- Batch scheduling with incompatible job families is also considered.
- Present constant ratio approximation algorithms.
