Quantum Genetic Algorithm based Scheduler for Batch of
Precedence Constrained Jobs on Heterogeneous Computing
Systems

Taj Alam , Zahid Raza

PII: S0164-1212(17)30219-4
DOI: [10.1016/j.jss.2017.10.001](https://doi.org/10.1016/j.jss.2017.10.001)
Reference: JSS 10053

To appear in: *The Journal of Systems & Software*

Received date: 1 July 2016
Revised date: 5 September 2017
Accepted date: 2 October 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Scheduling the DAG based tasks on heterogeneous distributed systems.
- Exploits the features of Quantum Computing and NSGA II to establish the Pareto fronts.
- QGLBS ensures that the communication cost and the critical path are considered.
- Hypervolume Indicator to assess the quality of Pareto fronts.
