This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- We study two-agent scheduling on a single batching machine with deteriorating jobs and release dates.
- We optimize one objective while ensuring the other objective under a fixed value.
- For the unbounded case, optimal algorithms are developed for the problems with identical release dates.
- For the bounded case, NP-hardness is proved for different problems.
- Several special cases of these NP-hard problems are analyzed, and optimal algorithms are developed for solving them, respectively.
