This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- We study inventory management models with an order service level objective or constraint
- We develop lower and upper bound model formulations, and show how to solve them heuristically.
- As the heuristics do not need detailed order data, they are appealing for large-scale settings.
- We consider first-come-first-served, no-holdback allocation, and inventory rationing.
- We adapt our heuristics for all allocation rules considered.
