This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- A new kind of multivariate sensitivity indices based on the wavelet analysis is proposed.
- The energy distribution of the time-dependent output is extracted as a quantitative feature of the dynamic model output.
- A vector projection method is used to assess the effect of input variables on the whole energy distribution of model output.

• The new sensitivity indices can provide a complementarity to the existent multivariate sensitivity indices.
