This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- The Problem Evolution Algorithm (PEA) is developed to solve the Facility Layout Problem (FLP).
- The PEA-LP works very well in solving various FLP benchmark problems.
- A polyhedral inner-approximation is proposed for the nonlinear department area constraints.
- Two symmetry-breaking constraints are introduced to increase the algorithmic efficiency.
- Relayout of department blocks in the context of the dynamic FLP was considered.
