This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Expert information and learning algorithms are combined to define a Bayesian network.
- The causal structure of a multi-scale timber mechanical analysis was modelled.
- Ranking of learning algorithms provided the best network candidates for the analysis.
- Proposed model and operative model provide similar results.
