This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

The self-care improved in motivational interviewing and usual education groups.

Education by motivational interviewing was more effective than the usual education.

Patient education in depressed HF should be done based on their psychological status.
