This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Incorporated a widespread symptomatology within and outside DSM
- framework, and examined the relationship with suicidal ideation in depression.
- Provided an effective risk model for suicidal ideation in depression, with 15 variables crying, helplessness, worthlessness, hopelessness, unusually restless, self-harm, mood-incongruent psychosis, feeling losing control of oneself, hypersomnia, sensory system complaints, derealization, guilt, suicidal attempts, male gender, the total course of depression.
- The present result has to be confirmed with longitudinal studies.
