This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- A novel high-performance self-powered UV photodetector is proposed.
- Proposed device exhibits improvement over the conventional photodetectors.
- PSO-based metaheuristic approach is suggested to boost the sensor performance.
- Optimized self-powered photodetector device is suitable for UV optical communications.
