This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Relationship between cyberbullying roles, cortisol secretion and psychological stress

Highlights

- Roles in cyberbullying are associated with differences in HPA axis function.
- Incidental cybervictims and cyberbully-victims show the highest cortisol secretion.
- Cyberbullies exhibit the lowest levels of cortisol secretion.
- Victimization is associated with an elevated profile of cortisol over a day.
