Author’s Accepted Manuscript

Agitation, Delirium and Cognitive Outcomes in Intracerebral Hemorrhage

PII: S0033-3182(16)30064-0
DOI: http://dx.doi.org/10.1016/j.psym.2016.07.004
Reference: PSYM659

To appear in: Psychosomatics

Received date: 13 February 2016
Revised date: 13 February 2016
Accepted date: 22 July 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting galley proof before it is published in its final citable form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Disclosures:
Dr. Naidech has consulted for the FDA (Center for Drug Evaluation and Research). Dr.
Cella, and Ms Beaumont have received prior funding from NINDS for Neuro-QoL,
contract HHSN271201200036C.
This project was supported by grant number K18HS023437 from the Agency for
Healthcare Research and Quality to Dr. Naidech. The content is solely the responsibility
of the authors and does not necessarily represent the official views of the Agency for
Healthcare Research and Quality.
The institution received funding from Northwestern University’s Clinical and Translational
Sciences (UL1RR025741) and from the Agency for Healthcare Research and Quality.
The infrastructure for automated retrieval was funded in part by National Institutes of
Health through a grant to Northwestern University’s Clinical and Translational Sciences
(UL1RR025741).
Dr. Liotta has received compensation from Edwards Life Sciences, Direct Flow Medical,
and SAGE therapeutics for work performed as a clinical trials collaborator unrelated to
this manuscript.
Dr. Maas received funding from the National Institute of Neurologic Disorders and Stroke
(NINDS) grant K23NS092975.
The remaining authors have disclosed that they do not have any potential conflicts of
interest. Disclosure of off-label product use is limited to the use of haloperidol for
agitation in the intensive care unit, and is mentioned only to demonstrate that it did not
affect study results.
