This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Depression is associated with serious consequences in patients with schizophrenia.
- Most previous studies used depressive scales that were not specific to schizophrenia to assess depression of patients with schizophrenia.
- This study showed that early age at onset, psychotic symptoms, and extrapyramidal side effects were significantly associated with depression, as measured by the Calgary Depression Scale for Schizophrenia, in Chinese male inpatients with schizophrenia.
