This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

A single factor was extracted from a range of cognitive and behavioural processes.

The factor was associated with anxiety and depression.

The relationship held across the sample and within diagnostic groups

Secondary factors were not associated with symptoms

A core process account of psychopathology was supported
