This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We investigated the conceptualization of emotion regulation difficulties in refugees
- We interviewed 147 resettled refugees from a variety of backgrounds.
- Models of emotion regulation difficulties with 5 and 6 factors showed adequate fit
- Factor correlations were significant for all subscales except awareness
- Specific types of emotion dysregulation predicted posttraumatic stress symptom severity
