This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Reservation wages are an important determinant of the gender wage gap.
- The gender wage gap becomes small and statistically insignificant once we control for reservation wages.
- We show that this is not driven by potential endogeneity.
- Differences in reservation wages can arise from productivity differences, the fact that women anticipate discrimination and different personality traits or preferences.
