This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Hotspots of keyword search detections over speech recognition output are identified
- Keyword hotspots are modeled as Hawkes process to automatically label data
- Prosodic features are used to predict hotspots for word-sized time intervals
- Two challenges, class imbalance and disparity of training and test data, are addressed
- A novel data selection method with good generalization properties, is proposed
