This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The paper offers a novel forward-looking study of the Russian water sector
- The foresight methods and four scenarios may be applicable to other countries
- The likely scenarios are negative: ‘Problem conservation’ and ‘Losses and accidents’
- The visionary scenario implies decentralization and widespread clean water technologies
- ‘National priority’ scenario offers unsustainable top-down solutions to most pressing problems
