This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- A new novelty detection classifier is proposed
- The proposed method is capable of considering the dependencies of relevant random variables
- No simplifying assumption is made for encoding such dependencies
- Combining additive modeling and boosting method to learn conditional densities
- 12% to 24% false positive reduction compared to one-class SVM and two other methods
