This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Executive functioning is the cognitive domain most strongly associated with overall psychosocial functioning in remitted MDD
- Executive functioning in remitted MDD contributes to subdomains of occupational functioning, subjective cognition, and leisure time
- In mentally healthy individuals, cognitive predictors of functioning include executive functioning, attention, and semantic fluency
