This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- New and broader vision of decision-making process on retrofit of groups of buildings is presented.
- It includes multivariate PCA and hierarchical clustering techniques.
- Aspects such as energy poverty and climate change were also considered.
- The method was tested on a group of 10 single family houses in Argentina.
- Energy retrofit can be assessed from a more holistic point of view
