This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- In a laboratory experiment, I investigate whether uncertainty leads to inertia in real choices through regret aversion and ambiguity-driven indecisiveness.
- I find that both mechanisms are equally important determinants of inertia, which in turn plays a major role in individual decision making.
- The effect of regret aversion on inertia depends on whether participants anticipate the opportunity to switch away from the status quo. When this opportunity is a surprise, regret aversion leads to inertia. When the opportunity to switch is anticipated, regret aversion no longer leads to inertia.
