Title: Gestational age modulates neural correlates of intentional, but not automatic number magnitude processing in children born preterm

Authors: Elise Klein, Korbinian Moeller, Stefan Huber, Klaus Willmes, Ursula Kiechl-Kohlendorfer, Liane Kaufmann

PII: S0736-5748(17)30177-6
DOI: <https://doi.org/10.1016/j.ijdevneu.2017.10.004>
Reference: DN 2221

To appear in: *Int. J. Devl Neuroscience*

Received date: 31-5-2017
Revised date: 12-9-2017
Accepted date: 12-10-2017

Please cite this article as: Klein, Elise, Moeller, Korbinian, Huber, Stefan, Willmes, Klaus, Kiechl-Kohlendorfer, Ursula, Kaufmann, Liane, Gestational age modulates neural correlates of intentional, but not automatic number magnitude processing in children born preterm. *International Journal of Developmental Neuroscience* <https://doi.org/10.1016/j.ijdevneu.2017.10.004>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Gestational age modulates neural correlates of intentional, but not automatic number magnitude processing in children born preterm

Highlights

- Prematurity is associated with less number-specific parietal activation
- Gestational age modulates intentional, but not automatic number magnitude processing
- Gestational age predicts the frontal-to-parietal shift of activation
