Please cite this article in press as: Arieli, I., et al. Sequential commitment games. *Games Econ. Behav.* (2017), <http://dx.doi.org/10.1016/j.geb.2017.08.009>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We consider extensive-form games where players have the option to commit to actions.
- Commitments are sequential, voluntary, and irreversible.
- Committing according to DFS orders lead to Pareto efficiency in two-player games.
- No order of commitments guarantees Pareto efficiency in four-player games.
