## Abstract

We consider a model with a countably infinite number of states of nature. The agents have equivalent probability beliefs and von Neumann - Morgenstern utilities. The No-Arbitrage Prices in this paper are, up to a scalar, the marginal utilities. We introduce the *Beliefs Strong Equivalence* and the *No Half Line Condition of the same type* conditions. Under these conditions, the No Arbitrage price condition is sufficient for the existence of an equilibrium when the commodity space is  $l^p$ ,  $1 \leq p < +\infty$ . This No Arbitrage condition is necessary and sufficient for the existence of equilibrium when the total endowment is in  $l^\infty$ . Moreover, it is equivalent to the compactness of the individually rational utility set.

**Keywords:** beliefs strong equivalence, asset market equilibrium, individually rational attainable allocations, individually rational utility set, no-arbitrage prices, no-arbitrage condition.

**JEL Classification:** C62, D50, D81, D84, G1.
