Debt Maturity across Firm Types: Evidence from a Major Developing Economy*

Cüneyt Orman†  Bülent Köksal
August 2016

Abstract

Existing literature provides little guidance on whether various debt maturity theories are useful in understanding the debt maturity choices of firms that are privately-held, small, and/or outside the manufacturing industry in developing economies. This paper conducts a comparative test of the major debt maturity theories using a firm-level dataset that covers a wide variety of firm types in a major developing economy, Turkey. Our findings provide considerable support for the liquidity risk, agency, and maturity-matching theories. The macroeconomic environment also has an important impact on debt maturity. The evidence for the signaling and tax theories, however, is weak at best.

Keywords: debt maturity structure, nonfinancial firms, firm heterogeneity, developing economy, Turkey

JEL Classification Numbers: G3, G32.
