This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A beam bending model is proposed to consider the effect of transversal spontaneous shear.
- It provides an analytical tool for light/heat induced bending of liquid crystal polymer strips.
- Light/heat induced bending is affected strongly by transversal spontaneous shear.
- Energetically most favorable liquid crystal orientation is not planar nor homeotropic, but tilted alignment.
