Recovery for overloaded mobile edge computing

Dimas Satria, Daihee Park, Minho Jo

PII: S0167-739X(16)30209-6

DOI: <http://dx.doi.org/10.1016/j.future.2016.06.024>

Reference: FUTURE 3090

To appear in: *Future Generation Computer Systems*

Received date: 30 January 2016

Revised date: 10 April 2016

Accepted date: 20 June 2016

Please cite this article as: D. Satria, D. Park, M. Jo, Recovery for overloaded mobile edge computing, *Future Generation Computer Systems* (2016), <http://dx.doi.org/10.1016/j.future.2016.06.024>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Fail-safe mobile-edge computing system is proposed.
- The system uses multihop wireless network.
- The system allows multi destination data transfer for mobile users to relay.
