This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- An algorithm to deal with the 3-D protein structure prediction problem is proposed.
- The method is a multimodal evolutionary algorithm allied to a local search strategy.
- The method was built as an incremental approach based on promising evolutionary components.
- Results are topologically compatible with the experimentally determined structures.
