This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Adaptive operator selection best balances exploiting knowledge with exploration.
- Adapting use of knowledge-dependent operators saved the most function evaluations.
- Strong preference for consistent solutions leads to insufficient exploration.
- This submission incorporates reviewer comments to reword sentences, tabulate hypervolume and inverted generation distance results, and include pseudocode of the algorithms.
