Scalable Model Exploration for Model-Driven Engineering

Antonio Jiménez-Pastor, Antonio Garmendia, Juan de Lara

PII: S0164-1212(17)30150-4
DOI: [10.1016/j.jss.2017.07.011](https://doi.org/10.1016/j.jss.2017.07.011)
Reference: JSS 10004

To appear in: *The Journal of Systems & Software*

Received date: 21 September 2016
Revised date: 9 June 2017
Accepted date: 11 July 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We combine fragmentation strategies and abstractions to visualize large MDE models.
- The approach has been realized in an Eclipse plugin.
- We present an evaluation in the embedded systems and reverse engineering domains, comparing with tools like Gephi and CDO.
- We obtain large gains in terms of time and memory with respect to visualizing monolithic models.
