This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We study the network design problem with relays (NDR) and discuss various transportation applications.
- We expose the relation between NDR and hub location problems.
- We further investigate the special case NDR-S (NDR with a single source for each demand) from the practical and theoretical point of views.
- We describe significant properties of optimal NDR and NDR-S solutions and use these properties to devise exact algorithms that can compete with the state of the art heuristics.
