This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Glucagon plays an important role in the development of an artificial pancreas.
- Controllability and observability of the system are discussed for a closed loop design.
- The Lyapunov equation is used to check the stability analysis of the model.
- We designed a proportional-integral-derivative (PID) controller for an artificial pancreas.
