Abstract

We use data from six cohorts of university graduates in Germany to assess the extent of gender gaps in college and labor market performance twelve to eighteen months after graduation. Men and women enter college in roughly equal numbers, but more women than men complete their degrees. Women enter college with slightly better high school grades, but women leave university with slightly lower marks. Immediately following university completion, male and female full-timers work very similar number of hours per week, but men earn more than women across the pay distribution, with an unadjusted gender gap in full-time monthly earnings of about 20 log points on average. Including a large set of controls reduces the gap to 5–10 log points. The single most important proximate factor that explains the gap is field of study at university.

JEL Classification: J16; J31; J71

Keywords: Gender wage gap; Field of study; University graduates; Germany

*We are grateful to Annette Bergemann, Sonia Bhalotra, Maru Canon, Adeline Delavande, Emilia Del Bono, George Gayle, Limor Golan, Angus Holford, Patrizia Ordine, Bob Pollak, Chiara Pronzato, Kjell Salvanes, Sarah Smith, Gerard van den Berg, Wilbert van der Klaauw, Christine Valente, and Anne Winkler for their stimulating comments and suggestions, and to seminar participants at Bristol, Calabria, Dondena Center for Research on Social Dynamics (Bocconi University), Essex, Institute for Social and Economic Research (Essex), Melbourne Institute, Statistics Norway, Washington University at St Louis, and ZEW (Mannheim). We also thank two anonymous referees for very helpful comments. We thank Kolja Briedis, Christian Kerst, Gregor Fabian, and Nicolai Netz for their help and for access to the DZHW data. Parey gratefully acknowledges the support of the ESRC Research Centre on Micro-Social Change (MiSoC) at the University of Essex.
