Title: High power deep UV-LEDs for analytical optical instrumentation

Authors: Yan Li, Miloš Dvořáka, Pavel N. Nesterenko, Nantana Nuchtavorn, Mirek Macka

PII: S0925-4005(17)31508-3
DOI: <http://dx.doi.org/doi:10.1016/j.snb.2017.08.085>
Reference: SNB 22952

To appear in: *Sensors and Actuators B*

Received date: 25-4-2017
Revised date: 16-7-2017
Accepted date: 9-8-2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

High power deep UV-LEDs for analytical optical instrumentation

Highlights

- Three new generation AlN substrate based deep UV-LEDs were investigated
- New generation UV-LED offers 100 times higher optical power than old generation
- Parasitic emission to deep UV emission intensity ratio is about 0.0002 %
- New generation deep UV-LED photometric detector showed excellent performance
