

## Accepted Manuscript

Title: A colorimetric and fluorescent probe for rapid detection of glutathione and its application to tissue specific bio-imaging in living cells and zebrafish

Authors: Liyan Chen, Jong-Su Park, Di Wu, Cheol-Hee Kim, Juyoung Yoon

PII: S0925-4005(18)30293-4  
DOI: <https://doi.org/10.1016/j.snb.2018.02.023>  
Reference: SNB 24118

To appear in: *Sensors and Actuators B*

Received date: 14-12-2017  
Revised date: 1-2-2018  
Accepted date: 2-2-2018

**Graphical abstract:**

**Highlights:**

- A rhodamine-based fluorescence probe for sensing glutathione was developed.
- Up to an 80-fold enhancement in the intensity of fluorescence and a color change from colorless to pink were achieved upon the addition of glutathione.
- The probe can be utilized to sense endogenous and exogenous glutathione in HeLa cells.
- The probe can be utilized to interrogate the oxidation states of glutathione.
- The probe can be utilized to detect glutathione in zebrafish with a high specificity for olfactory pit tissue.
