This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**\*Highlights (for review)**

## Highlights

I estimate the lower bound on the power law distribution as well as the exponent.

I find the power law distribution is a good fit to this data.

I find smaller estimates of the power law exponent and poor fit with the data when the lower bound on the distribution is not estimated.

I find that the power law distribution is more appropriate than a Weibull distribution.

I find that a lognormal distribution fit to the upper tail of the data is also a plausible fit to the data.
