This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We propose a novel many-objective clustering algorithm for categorical data.
- Our method can take advantage of different cluster validity indices simultaneously.
- Two versions of the proposed algorithm are presented with and without cluster number.
- The finding can be instructive for solving other real-world optimization problems.
