This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- A model to determine the optimal allocation of uncertain supply is presented.
- The model is motivated by operations of a multi-warehouse food bank network.
- Equity is measured in terms of pound of food distributed per person in poverty.
- Optimal allocation rules are identified under varying supply and demand scenarios.
